Claims

What is Claimed is:

1. Coating agents with resin solids comprising

30

- (a) 10 wt-% to 80 wt-% of a non-aromatic polyester polyol,
- (b) 0 wt-% to 70 wt-% of at least one constituent selected from the group consisting of hydroxyl-functional binders that are different from polyester polyol (a), hydroxyl-functional reactive thinners and combinations thereof, and
- (c) 20 wt-% to 60 wt-% of at least one cross-linking agent for the hydroxyl-functional components (a) and (b), wherein the polyester polyol (a) has a calculated molecular mass from 600 to 1400, an acid value from 0 to 30 mg KOH/g and an hydroxyl value from 250 to 600 mg KOH/g with a calculated hydroxyl functionality from 4.5 to 10, and is composed of components which comprise
- (a1) hydroxyl components comprising 0 wt-% to 20 wt-% of at least one diol and 80 wt-% to 100 wt-% of at least one polyol having 3 to 6 hydroxyl groups,
- (a2) carboxyl components comprising 0 wt-% to 20 wt-% of at least one monocarboxylic acid and 80 wt-% to 100 wt-% of at least one dicarboxylic acid, and optionally
- (a3) at least one hydroxycarboxylic acid component, the sum of the percentages by weight of components (a) to (c), of components (a1) and of components (a2) being 100% in each case.
- 2. Coating agents according to claim 1, wherein the polyester polyol (a) comprises 30 wt-% to 60 wt-% of at least one hydroxyl component (a1), 30 wt-% to 70 wt-% of at least one carboxyl component (a2) and 0 wt-% to 10 wt-% of at least one hydroxycarboxylic acid component (a3).
- 3. Coating agents according to claim 1, wherein the hydroxyl component (a1) consists of at least one (cyclo)aliphatic polyol having 3 to 6 hydroxyl groups.

35

4. Coating agents according to claim 1, wherein the carboxyl component (a2) consists of at least one dicarboxylic acid.

- 5. Coating agents according to claim 1, wherein the polyester polyol (a) comprises dimer fatty acid as one of at least two dicarboxylic acids of the carboxyl component (a2) corresponding to a weight ratio from 5 wt-% to 45 wt-% of dimer fatty acid and 55 wt-% to 95 wt-% of at least one additional dicarboxylic acid.
- 6. Coating agents according to claim 1, wherein the cross-linking agent (c) is selected from the group consisting of aminoplastic resins, free polyisocyanates, blocked polyisocyanates, transesterification cross-linking agents or combinations thereof.

5

10

15

- 7. Coating agents according to claim 1, selected from the group consisting of aqueous coating agents and coating agents based on organic solvents.
- 8. A process which comprises applying a multi-layer coating on a substrate using a coating agent according to claim 1 and curing said coating.
- 9. A process for forming a coating layer as one coating layer of a multi-layer coating which comprises applying to a substrate a coating layer selected from the group consisting of external pigmented top coat layer and transparent clear coat layer, said coating layer being applied from the coating agent according to claim 1 and curing said coating layer.
- 25 10. A process according to claim 8, wherein the substrates are substrates selected from the group consisting of automotive bodies and body parts.
